The Strähle Centre – Experience modern workplaces

Our daily work is to develop tailor-made interior solutions for our customers that fulfil the requirements of a modern working environment. Our own working environment is also designed to the highest standards: it's where we work, and it's also the location of our "Space Unlimited" exhibition. This is where we make modern office concepts come to life in a very special way.

From the multi-space office to open room solutions, we use our partition wall, room-in-room and acoustic systems to show what an optimum contemporary working environment can look like.

Our "Space Unlimited" in Waiblingen and Borkheide are open for clients, contractors, architects and planners to view as inspirational sources of information. You can convince yourself personally of the freedom of design, the high architectural standards and the acoustic effectiveness of our room solutions.

Come and visit us. We look forward to seeing you.

Waiblingen.

The office environment at our headquarters in Waiblingen near Stuttgart, which is more than 2000 square metres in size, is one of the largest exhibitions for partition walls, room-in-room and acoustic systems.

Team offices: short distances, healthy environment

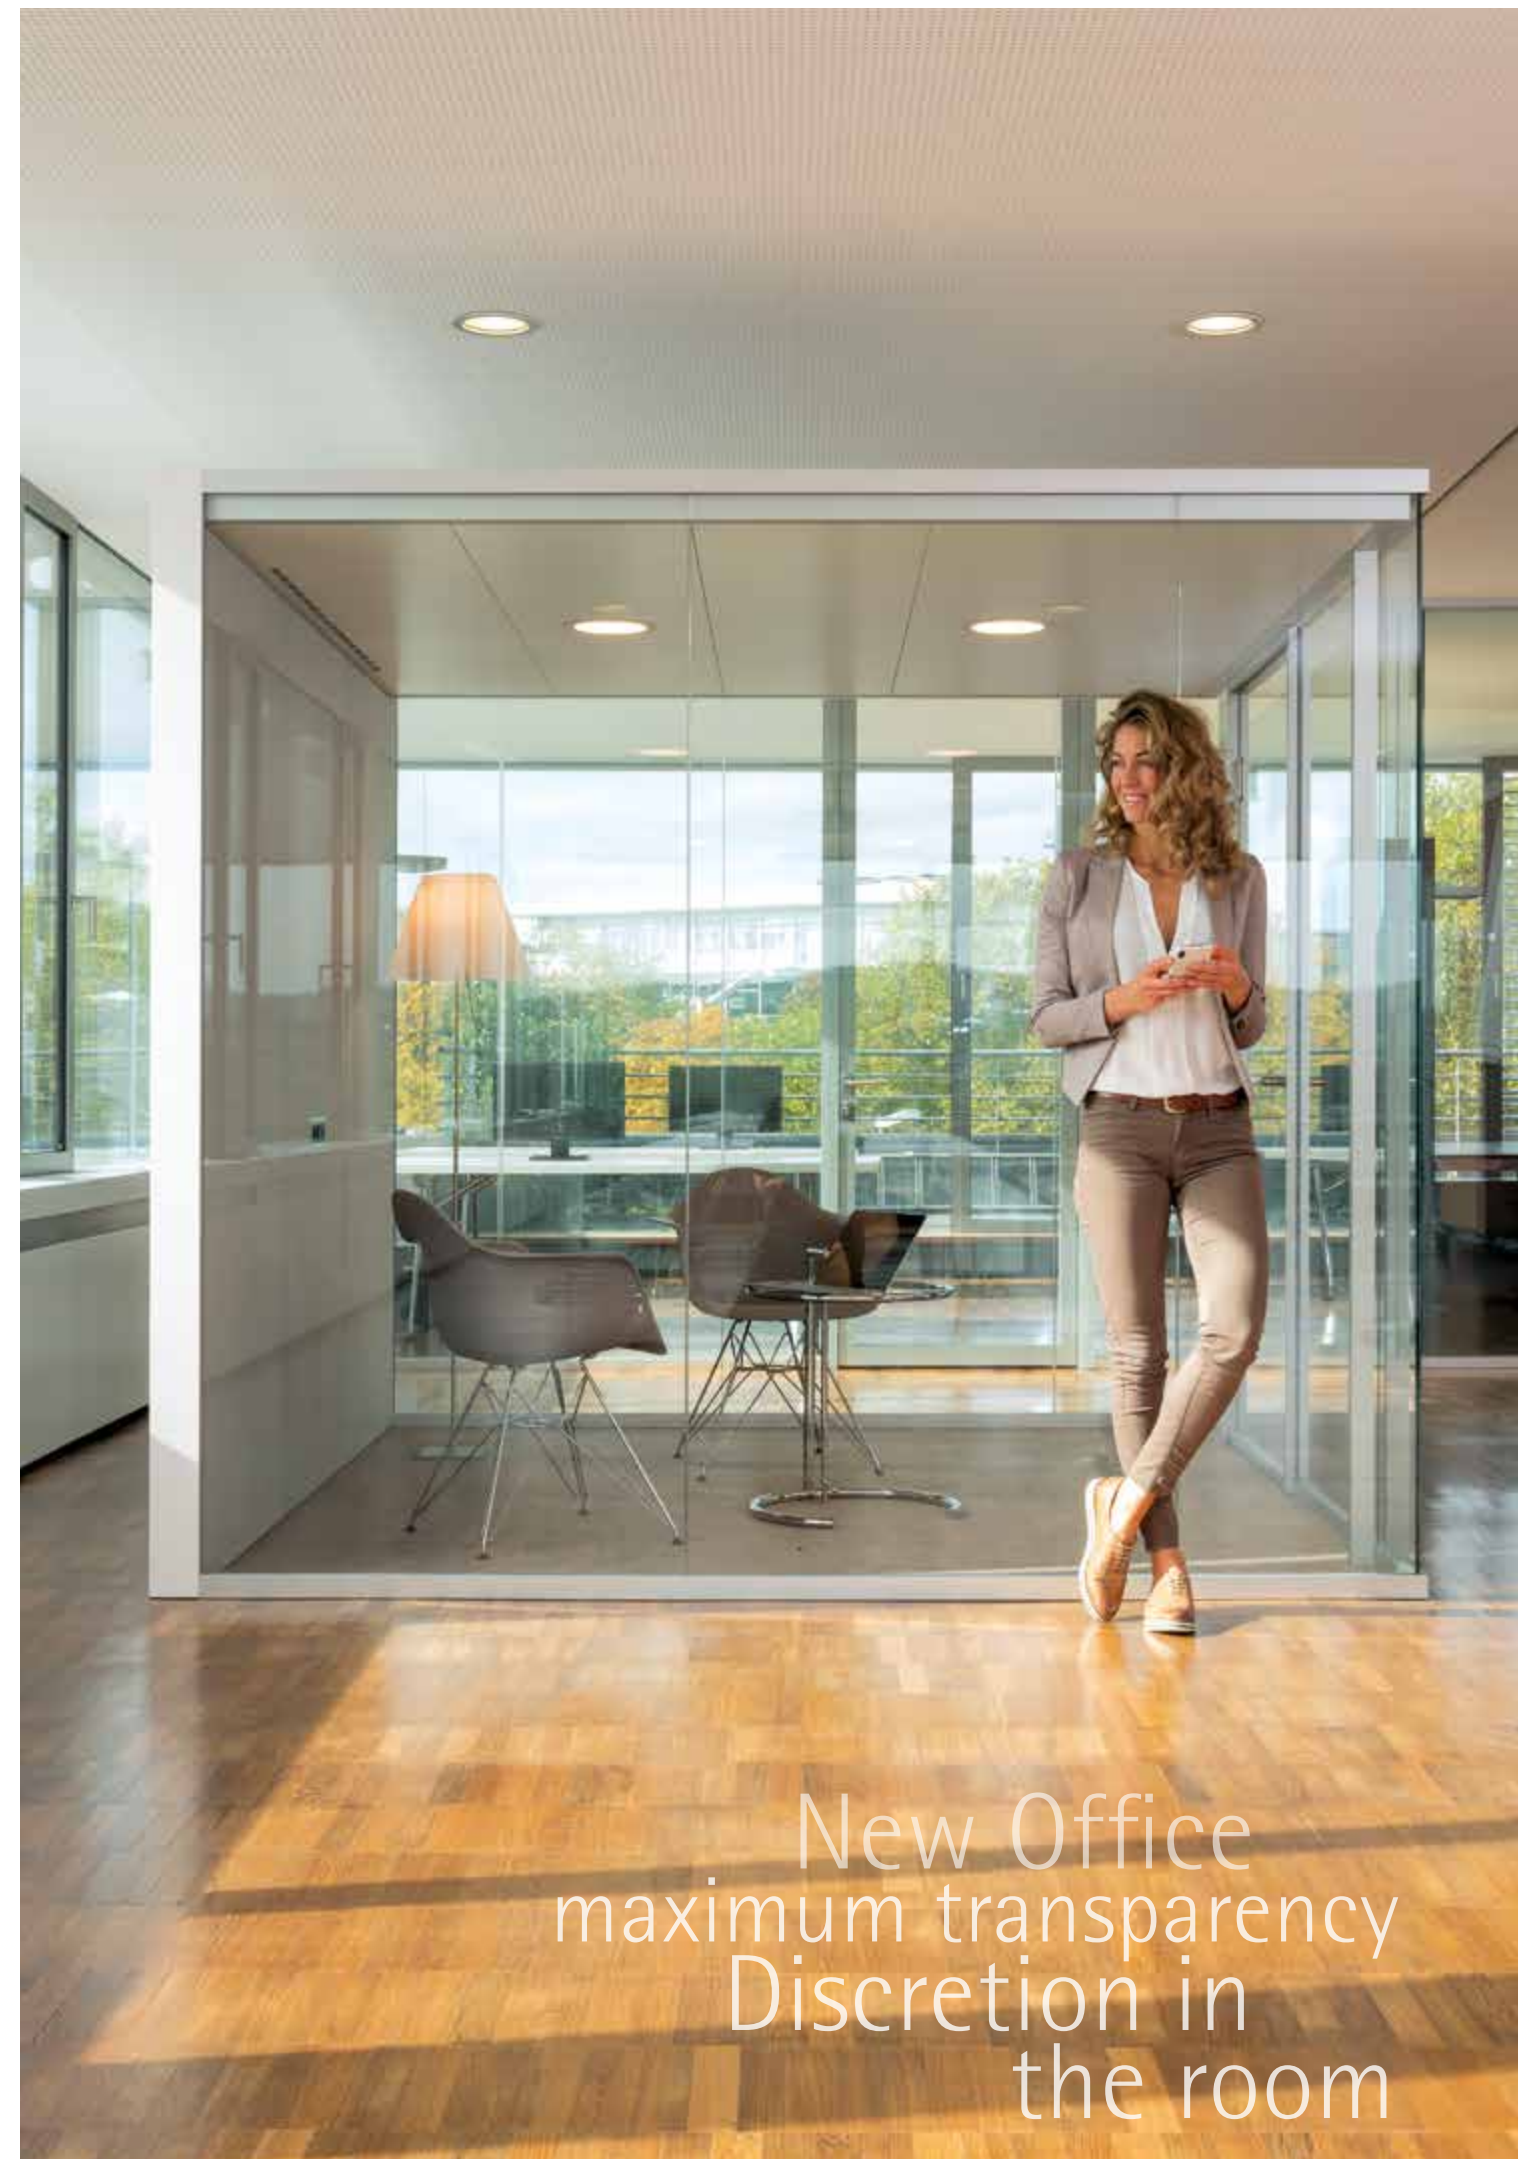

The workplace of the future is communicative and so flexible that each individual can do their job in the most effective way. When we were designing the levels, our focus was on the well-being of our staff, because a good working environment enhances health and efficiency. Open and closed office areas and room-in-room systems for meetings provide a varied office environment that is fit for purpose and provides the suitable space for any work situation. All team offices are acoustically optimised so that even if there is a conversation going on at the next desk, it is still possible to concentrate on the work in hand. Adjustable-height desks and Strähle organisation systems integrated into the partition walls enable scope for shaping the workspace individually.

the room

Open Space: a feeling of openness combined with discretion

With its glass acoustic wall, Strähle displays a view of the future of interior design. We were the first company in Germany to be awarded the DGNB Certificate for interiors for redesigning open office spaces, and we demonstrate how sustainable interior design can be realised. When we design and apply our interior solutions, we take all aspects of sustainable building into account: ecology, economy, social aspects, technology and processes. From manufacture to recycling.

The result is a communicative, modern world of work that provides different spaces for different tasks. In order to do justice to the wide variety of communication requirements, room-in-room systems were included as retreat areas. An open lounge area invites spontaneous exchanges of ideas.

New Work!
DGNB-certified

Optimum acoustics with the glass acoustic wall

System 7400 is a combination of room-height glass elements with highly absorbent wall-mounted and ceiling-mounted absorbers. It enables acoustical separate work areas to be created with reverberation times which are adjusted for the task in hand. The transparency of the open-plan space is retained by means of the horizontal arrangement of the absorbing surfaces and the lack of doors.

Glass acoustic wall System 7400

Oasis in an open-plan space

Kubus I Dialog is the perfect retreat area in an open space. Whether it's as a conference space or for undisturbed telephone calls and video conferences: it provides high sound insulation, pleasant room acoustics and a ventilation system.

System 3500

Skyoffice: a wide range of uses

Both beautiful and spacious, the Skyoffice with its far-reaching view of the vineyards around Waiblingen is fascinating. The Skyoffice is a multifunctional conference room created to the highest standards. It is the venue for training courses exhibitions for a large number of people, also for conference and meeting settings. The different versions of partition wall systems, intelligent connections to façades, floors and ceilings, doors with sound-proofing, integrated technology, air conditioning, in a range of materials, are all examples of future work and modern interior design.

Acoustics workshop: experience sound insulation and acoustics

The Acoustic Workshop in Waiblingen is both a showroom and a training centre. In an area of over 400 square metres, we present an architecturally sophisticated office scene with single, shared and open-space offices as well as room-in-room solutions. Experience the effect that sound-absorbing and sound-insulating measures have on the room and building acoustics in exemplary room situations. Clients, contractors, acousticians and architects can compare different sound insulation values and reverberation times and gain helpful knowledge for their projects.

Conferences and meetings

Multifunctional conference room for meetings and events

Borkheide.

At our site in Borkheide near Berlin we have created a transparent, acoustically optimised working environment that enables both cross-team and concentrated work in equal measure.

working

Conferences and meetings: flexible and communicative

A focus point of the new planning was to encourage formal and informal communication. As a result, the conference area and the canteen are designed as an open room in the centre of the building. They can be put to variable use, for example, for training or events with a larger number of participants. Parquet flooring, modern furniture and integrated material absorbers ensure a cosy ambience. The spacious coffee and tea break areas on each floor are ideal for staff to have short chats and compare notes.

System 2000

Kubus retreat area

The Kubus I Dialog room-in-room system with high sound insulation serves as a retreat area for phone calls, concentrated work and meetings. With its integrated partition walls it has a very clean aesthetic.

System Orga

Multi-space: Special ambience, wide range of functions

The System T oak partition wall system with integrated curtains provide for a warm working ambience. System 2300 with black profiles, also shown, provides an elegant contrast to the warm wood tones. This floor houses the reception, team offices, meeting rooms and the copy room, all close together. Thanks to sound-insulating wall and door solutions, the noise-intensive areas are acoustically screened off. The office partitions include fabric-covered absorbers which reduce reverberation times and provide pleasant indoor acoustics.

System 3500

Team offices: flooded with daylight

The layout on the ground floor is governed by individual and team offices. Although the office units are small, daylight reaches the centre of the building through the glass partition walls, making this level appear light and transparent. Depending on the sound insulation requirements, the partition walls are in single or double glazed with all-glass doors, aluminium frame doors or solid doors. Wall-integrated acoustic elements reduce echo times.
