

SYSTEM 2000, 2300

myhive,
Wien

case study

Case study
No. 40

myhive is a modern office concept where working and living are fused together. In a nutshell: versatile office premises with optimum infrastructure, accessibility and work-life balance.

The projects were realized projects by our Austrian branch inside by Strähle.

myhive Ungargasse

The office building of IMMOFINANZ AG on Ungargasse in Vienna was completely renovated in 2019 and offers modernistic, versatile office sizes for a wide variety of tenants. Inside's "2000" partition system featuring black anodised profiles has been installed over eight floors.

myhive am Wienerberg

We introduce you to myhive am Wienerberg, Vienna, where an entirely new office concept has been created in an exceptional location – with a breathtaking view to boot. All the usual comforts allow for smooth day-to-day business and there is more than enough space for interaction – the ideal foundations for great ideas and a whole lot of motivation. The high-end interiors including raised floors and cooling ceilings promise excellent room conditions all year round. The 2.8 m high offices can be flexibly adapted to make the most of the space. Mirroring the Ungargasse site, inside's "2000" partition system featuring black anodised profiles has been installed throughout.

Agile work environments

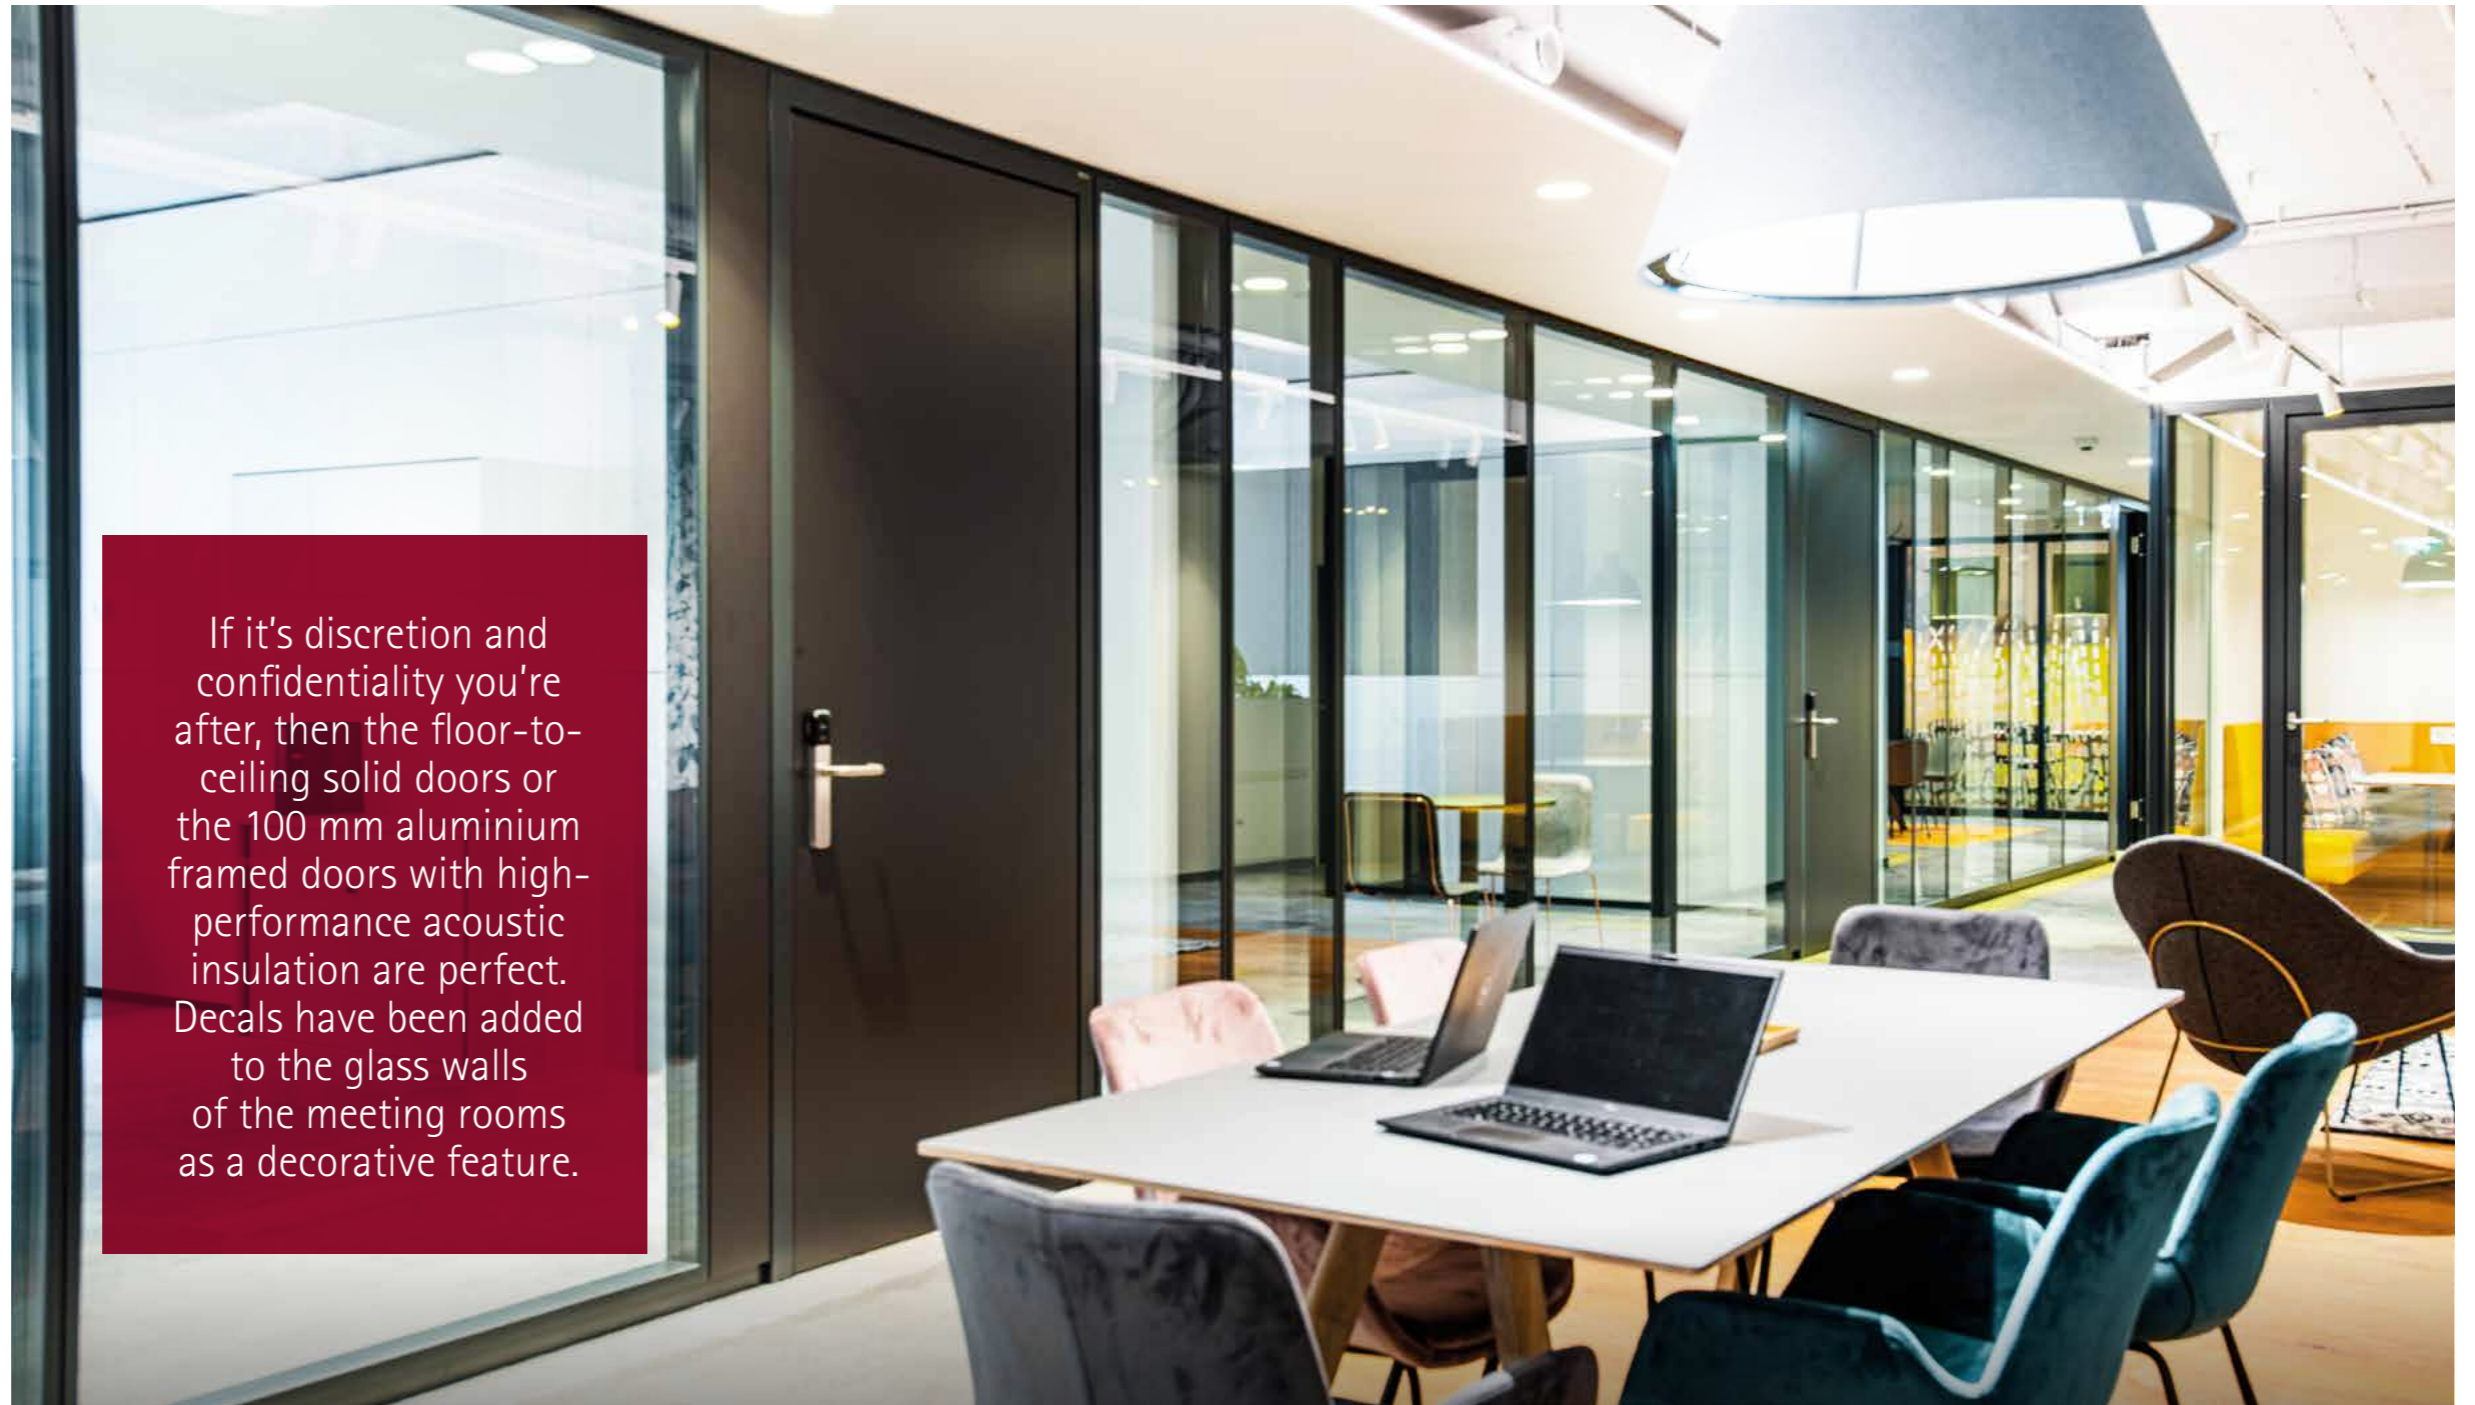

Agile work environments are not pie in the sky for us; we already carry them off today.

The double-glazed System 2000 ensures a high degree of acoustic insulation and a sleek appearance on both sides. Thanks to the modular design, various types of elements are made possible, whether balustrade, top-light or fully glazed walls.

The office partition walls have been equipped with a vast array of organisational elements, such as sideboards, fabric pinboards and whiteboards, to help workers in their day-to-day tasks. As they can be conveniently integrated into the joints of the partition walls, no tools are required to attach them.

Scan the QR code and find out more about the project.

If it's discretion and confidentiality you're after, then the floor-to-ceiling solid doors or the 100 mm aluminium framed doors with high-performance acoustic insulation are perfect. Decals have been added to the glass walls of the meeting rooms as a decorative feature.

Innovative glazing, combining transparency and discretion

The double-glazed system ensures a high degree of acoustic insulation and a sleek appearance on both sides. A third glazing level comprising electrically satinised glass (switchable glass) is installed in the middle of the structural glazing. Its entire surface can be made opaque at the touch of a button using a tablet. Users can therefore freely choose between an open-space feel and privacy in the blink of an eye. Decals have been added to the glass walls of the meeting rooms as a decorative feature and give each one an individual flair.
